

PS2 Pipe Temperature Sensor

The PS2 pipe temperature sensor may be used with any Tomtech computer or controller to measure water temperature in the range 0-100 degrees C.

It has a stainless steel probe which is designed to screw into a pipe. The sensor dimensions are as follows:

All dimensions in millimetres.

A screened two core cable is recommended for connection between the PS2 and the computer. The sensor provides a 4-20mA output and is powered from the computer 20v sensor power supply. 4mA corresponds to 0C, 20mA corresponds to 100C.
